(Significant changes from previous situation reports are in red.)

**Significant Issues:**

**River Watch 2022**

The SEOC Kuskokwim Division began Riverwatch aerial surveillance of the river over the weekend and plans to have daily Kuskokwim community briefing calls at 1600 hrs to report river ice conditions.

River ice conditions along the Kuskokwim south of Tuluksak are beginning to mush out, while ice conditions up river of Aniak are still showing solid ice and ample amounts of snow pack in the hills.

A flood watch is in effect for a potential ice jam on the Kuskokwim River at Crooked Creek through Sunday evening. The Riverwatch reconnaissance flight on Tuesday afternoon observed numerous large cracks and pressure ridges which are indicative of moving ice in the miles upstream of the community and many miles of intact and stationary ice downstream of the community. In addition, river ice thickness around Crooked Creek was particularly thick this winter. If an ice jam were to form, water levels would rise quickly.

The Kuskokwim Division will continue to meet with local, regional and tribal organizations in the region to discuss emergency flood plans, river ice conditions and potential ice jam flooding concerns.

Bi-weekly incident specific River Watch Situation Reports will be produced on Tuesday and Thursday each week and disseminated the following day.

NWS break-up map and current river conditions can be found at: <https://www.weather.gov/aprfc/>

**Threat Level Changes:**

None.

**State of Alaska Department of Health and Social Services (DHSS)**

DHSS is now leading the State of Alaska COVID-19 Recovery through Department Operations, supported by SEOC and other state departments as required.

For current COVID-19 information, see:
