THREAT LEVEL CHANGES:

July 2021 - 2021 Alaska Peninsula M8.2 Earthquake

At 10:16 pm on July 28, the National Tsunami Warning Center (NTWC) in Palmer, Alaska recorded a magnitude (M)8.2 earthquake 60 miles south of Chignik. The magnitude and location of the earthquake triggered a tsunami warning for an approximately 600-mile-long coastline from Nikolski to the Kenai Peninsula. Based upon the warning, multiple communities within the warning area evacuated to higher ground. The SEOC recalled all operations staff and the Public Information Officer to support the community response. The SEOC received initial reports of strong earthquake shaking in several communities including Sand Point, Cold Bay, Perryville and Chignik. The NTWC issued wave arrival times for 13 communities with the first wave, if generated, to reach Sand Point by 10:55 pm, and the rest of the communities over the next two hours. A major wave was not generated, but sea level gauges recorded a tsunami of 0.7 feet at Old Harbor just after 1:00 am on July 29. As a result, NTWC determined there was no threat and canceled the tsunami warning at 1:29 am.

The USGS Shake Map produced for this earthquake showed the highest seismic shaking intensities in the Cold Bay, Sand Point, Perryville and Chignik areas of the Alaska Peninsula. The SEOC conducted a full communication check with all communities in the warned areas within one hour of the tsunami warning.

There were no immediate reports of substantial damage or significant injuries from the earthquake and community leaders were waiting for daylight before assessing impacts. Today, the SEOC has been working with DOT&PF, the Lake and Peninsula Borough, the Aleutians East Borough, and several communities to assess the earthquake impacts, including residential and public facility damages.

State of Alaska Department of Health and Social Services (DHSS)

DHSS is now leading the State of Alaska COVID-19 Recovery through Department Operations, supported by SEOC and other state departments as required. For current COVID-19 information, see: <u>https://covid19.alaska.gov/</u> <u>https://www.cdc.gov/coronavirus/2019-ncov/index.html</u>

Significant Weather:

A Flood Advisory has been issued for the Snake and Nome Rivers near Nome until 3:00 P.M. today. Localized flooding is possible along the coastal areas near the mouth of the rivers.

High Surf Advisories are in effect for:

- Kuskokwim Delta Until noon today. Surf 1 to 2 feet above the normal high tide line.
- Southern Seward Peninsula Coast, Eastern North Sound, Nulato Hills, St. Lawrence Island and the Bering Strait Coast – Until noon today. Surf 4 to 6 feet above the normal high tide line.

A Special Weather Statement has been issued for the West Coast and Western Interior for another round of significant rainfall that is expected Thursday night through Friday night. Due to the recent rainfall in the area, streams and rivers are expected to remain elevated through the weekend in the region.
